Our goal is to focus on
a total health approach
considering mental and
physical wellness.

Rehabilitation Services

Our Rehabilitation Center offers many services including physical, occupational, and speech therapies.

We provide both inpatient and outpatient therapy services. Our team of rehabilitation specialists customizes care to meet patient needs. We are committed to returning individuals hurt by accidents or disease to their best function by improving abilities and skills in everyday activities.

Speech Therapy

We assess, diagnose, and treat speech-related disorders, including:

- Speech, language, cognitive, communication, voice, and swallowing issues from injury, hearing loss, stroke, cerebral palsy, cleft palate
- Aphasia, language delay, stuttering, articulation, dysarthria, apraxia

Physical and Occupational Therapy

Our therapists help restore function, improve mobility and strength, relieve pain, and prevent or limit physical disabilities in patients suffering from injuries or disease including:

- Upper, Mid, and Lower Back Pain
- Extremity Pain
- Pulmonary Disorders (obstructive and restrictive)
- Cardiac Disorders
- Orthopedic Disorders (fractures, sprains, and strains)
- Neurological Disorders (stroke, traumatic brain injury, and upper and lower motor neuron disorders)

Through the development of an individualized plan of care, therapists improve function, allowing patients to perform their normal daily activities.

Meet Our Team!

Dr. Daniel Perkins and our staff of licensed clinical professionals specialize in wound care, pain management, orthopedics, and caring for neurologically impaired patients. Our compassionate team works to help you enhance your daily living.

**Let us help you achieve
your recovery goals and
get back to living your best
life!**
